SUZUKI SV 650 2016+	ENGINE GUARD	EGSV

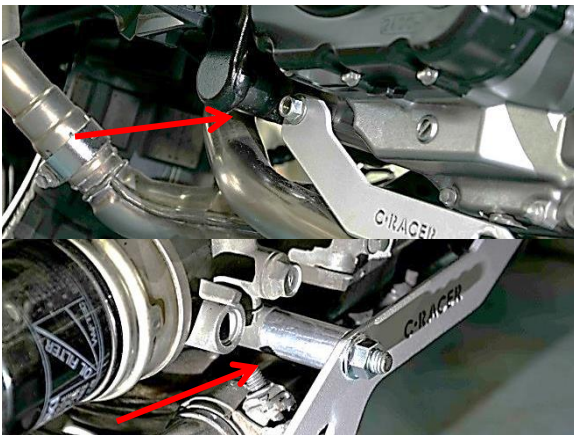

## CONTENTS

- 1 X aluminum guard
- 2 X safety nuts M10
- 1 screw M10X220
- 1 X adaptor 10X20 -38mm
- 1 X adaptor 10X20 -48mm

### LEFT SIDE

Undo the screw in the back side of the engine and pull it out so that it protrudes a length of 10mm. Place on that same engine screw, the left side of the guard.

### RIGHT SIDE

Place the right side of the guard on the engine screw and tighten lightly so as to simply hold it in place.

### LEFT SIDE

Following the photo on the left, place the nut on the engine screw, slide through the adaptor (10X20 -38mm) and then altogether push it through the hole of the engine.

### RIGHT SIDE

Do the same on the right side as well, using the other adaptor.

Tighten all screws very well.

NOTE: when you perform an oil/filter change, or any other task of this type, you must always remove the guard first.
