

Model	Product	code
SUZUKI SV 650 2016+	FORK GUARDS	FGSV

CONTENTS

- 2 X plastic covers
- 4 X tire ups (360X7,5)
- 8 X foam stick tapes (50X20)

First , place the covers in position to get a feel of where and how to put them in position.

Clean well the front forks and place the foam stick tapes as shown in the photo.

It's not important to be exact since they are used mostly to prevent friction between the plastic and the fork.

To make the installation easier, place the tireups as shown in the photo – you may of course select any other way that is preferable to you.

Place the covers on the forks, wrap around the tire ups and before tightening well, make sure they are in the correct position.

ATTENTION: the bottom left tire up needs to be passed through **BEHIND** the ABS wire, as shown in the photo!!!!

Tighten well and cut off the remaining parts of the tire ups – make sure you hide the 'heads' of the tire ups behind the plastic cover.
